SUMMARY

WooCommerce Plugin Engineer and PHP developer with 4+ years shipping production WordPress plugins, scalable database architecture, and third party integrations. Former Product Owner of Checkout Field Editor, a WordPress.org plugin with 400,000+ active installations and a 4.9 out of 5 rating. Skilled in transactional data design, the WP REST API, security hardening, and system level performance optimization.

CORE COMPETENCIES

WooCommerce Plugin Architecture • Database & System Design • WP REST API, Hooks & Filters • Third Party API Integration • Security Hardening & Mitigation • Performance Optimization & Profiling • Product Ownership & Roadmapping • Production Debugging

OPEN SOURCE

Order Archive Manager for WooCommerce | Solo Plugin Release, v1.0.0 | wordpress.org/plugins/order-archive-manager-for-woocommerce

- Open source WooCommerce plugin that archives historical orders into dedicated database tables using row by row transactional operations with a verification layer before any live data is deleted.
- Includes a dry run mode, a weighted 0 to 100 database health score refreshed on a WP Cron schedule, a full restore workflow preserving original order IDs, line items, meta, and refunds, and namespaced PSR 4 architecture that passed WordPress.org plugin review for coding standards and SQL safety.

EXPERIENCE

Software Engineer — Fortunesoft IT Innovations

April 2025 to Present | Kerala, India

- Neutralized a sustained bot attack on Hauptwerk's checkout and login by deploying rate limiting, honeypot traps, and request fingerprinting, blocking 100% of malicious traffic with zero false positives on legitimate users.
- Eliminated manual license processing by integrating the PACE Central API, automating deposit and activation on every purchase and renewal.
- Recovered all missed subscription renewals by diagnosing silent WP Cron failures caused by memory exhaustion and lock collisions, then added structured logging to prevent recurrence.
- Built a WordPress bridge plugin connecting Collegewear's React based sash builder to WooCommerce, with dynamic royalty fee calculation from design configuration rules.
- Cut Collegewear's product API response times by profiling the endpoint layer and removing redundant calls and payload bloat.

Software Engineer to Product Owner — ThemeHigh / Zennode Technologies

June 2021 to July 2024 | Kerala, India

- Grew Checkout Field Editor into a WordPress.org plugin with 400,000+ active installations and a 4.9 out of 5 rating across 1,000+ reviews, as Product Owner.
- Reduced repeat support volume each release cycle by owning the full product lifecycle: versioning, a roadmap shaped by support ticket patterns, and dev and QA coordination.
- Cut checkout address errors for international merchants by shipping Google Places API autocomplete, earning consistently strong user feedback.
- Prevented checkout conflicts on customer stores by building cross plugin compatibility layers across payment, shipping, and subscription tools.

Intern — One Team Solutions

September 2020 to November 2020 | Kerala, India

- Delivered an internal Python and Django project covering models, views, routing, and REST endpoints that fed directly into a multi biometric voter fraud detection system.

KEY PROJECTS

Pacific Energy: Migrated a corporate site from Joomla to WordPress with WPML multilingual support, SEO safe redirects preserving original URLs, and Figma designed blog templates.

NexaTherapy & Livolab: Delivered pixel accurate Figma to WordPress builds with GSAP scroll animations, ACF driven content architecture, and mobile first layouts.

Cresta Medical: Built a Singapore clinic website from Figma with Elementor and ACF/SCF, SMTP verified booking and contact forms, and in person plus teleconsult flows.

Asia Symbol: Migrated a three province manufacturer's corporate site from Joomla to WordPress as a 3 language WPML build.

TECHNICAL SKILLS

Languages & Frameworks: PHP, JavaScript, Python, Django, Django REST Framework

CMS & eCommerce: WordPress, WooCommerce, WooCommerce Subscriptions

APIs & Integration: WP REST API, Google Places API, PACE Central API, AJAX

Frontend: HTML5, CSS3, JavaScript, GSAP, Elementor, ACF

Database: MySQL, InnoDB, WPDB, Custom Database Tables

Tools & DevOps: Git, GitHub Actions, Docker, Composer, WP CLI, WP Cron, Jira

Standards & Practices: Object Oriented PHP, PSR 4, PHPCS, Namespaces, Security Hardening, SQL Optimization

EDUCATION

B.Tech, Computer Science — College of Engineering, Karunagappally (CUSAT) | 2014 to 2018 | Kerala, India
